Sergio Asensio

Technical Lead specialising in software architecture with over 10 years of experience designing, developing, and evolving software solutions. Mathematics graduate with more than 4 years of experience in technology projects within the water and environmental sectors.

I lead software projects and development teams throughout the entire software lifecycle, from requirements analysis and architecture definition to development, deployment, and production support. I act as a bridge between business and technology, translating needs into viable, reliable, and maintainable technical solutions.

I remain actively involved in architecture and development, code reviews, CI/CD, containerisation, deployments, and observability. My experience spans web and mobile applications, IoT systems, telemetry platforms, and cloud-native architectures, working with technologies such as Java, Angular, Flutter, Node.js, Python, Docker, Azure, OpenShift, and ThingsBoard.

EDUCATION

2011 – 2016

BSc in Mathematics – University of Zaragoza

LANGUAGES

Spanish

Native

English

Upper Intermediate – professional written and spoken proficiency

TECHNOLOGIES AND TOOLS

Backend

Java, Spring MVC, Spring Boot, Hibernate, JPA, Node.js, Express.js, Python, PHP, Ruby on Rails

Frontend

Angular, NgRx, React, TypeScript, JavaScript, HTML, CSS, SCSS, JSP, JSPX, Bootstrap, Angular Material

Mobile

Flutter, Dart, BLoC, SQLite, Google Maps

Platforms and IoT

Salesforce, ThingsBoard, Redmine, Marketing Cloud

Databases

PostgreSQL, TimescaleDB, Oracle, MySQL

ETL

Talend Open Studio

Cloud, DevOps and CI/CD

Docker, Docker Compose, OpenShift, Azure, Azure Functions, Heroku, ElliotCloud, GitLab CI/CD

Observability

Alloy, Loki, Grafana, LogQL

Integrations

REST, SOAP, Apprise, Email, Telegram, Twitter, Firebase Cloud Messaging, SMS platforms

Security

Keycloak, LDAP, OAuth 2.0, OpenID Connect, JWT, SSO, RBAC, CORS, API security

IDEs

IntelliJ IDEA, Visual Studio Code, Eclipse

Version Control

Git, SVN, CVS

Repositories

GitHub, GitLab, Bitbucket

Project Management

Jira, Redmine

Methodologies and

Technical Quality

Scrum, Kanban, Gitflow, Pull Requests, code reviews, Clean Code, SOLID, testing, roadmaps, technical documentation

WORK EXPERIENCE

Nov 2021 – Present

TECHNICAL LEAD – Adasa Sistemas

Technical leadership and software architecture across web, mobile and IoT projects in the water, environmental monitoring, telemetry, meteorology and public administration sectors.

Responsible for the full software lifecycle: requirements analysis, architecture design, technical decision-making, development, code review, CI/CD, deployment, and ongoing evolution in production.

- Technical and product ownership of a platform for the management and control of non-domestic wastewater discharges, replacing a legacy Microsoft Access solution and integrating authorisations, inspections, laboratory analyses, case tracking, and discharge fee calculations into a single system.
- Architecture and integration of an operations and monitoring platform for meteorological radar systems. Led the evaluation and adoption of ThingsBoard as the IoT foundation of the solution, defining integrations and data flows, and facilitating knowledge transfer through video tutorials for development teams.
- Technical coordination of an offline-capable Flutter application for field sensor data collection and incident reporting, subsequently evolved to support additional platforms, synchronization mechanisms and multiple notification channels.
- Contribution to legacy system modernisation, ETL-based data migrations, Azure Functions and cloud-based solutions for real-time wastewater treatment optimisation.
- Engineering standardisation through reusable Angular, Node.js and Flutter project foundations, CI/CD pipelines, Docker-based delivery strategies, technical guidelines, code reviews, mentoring and internal knowledge-sharing initiatives.

Technologies: Angular, NgRx, Node.js, Flutter, Python, PostgreSQL, TimescaleDB, Docker, OpenShift, Azure, ThingsBoard, GitLab CI/CD, Keycloak, Talend, Alloy, Loki, Grafana.

Apr 2020 – Nov 2021

SENIOR ANALYST DEVELOPER – UST Global

Played a key role in the development and evolution of a hospital software platform, taking ownership of the estimation and implementation of new modules requested by the client.

Contributed to the evolution of both frontend and backend architecture, as well as Pull Request reviews, continuous integration practices and knowledge sharing within the development team.

This role marked a progressive shift towards greater technical ownership, architectural responsibilities and support for other developers.

Technologies: Angular, NgRx, Node.js, TypeORM, PostgreSQL, Microsoft Azure.

Mar 2018 – Apr 2020

ANALYST DEVELOPER – Grupo Oesia

Worked on public-sector software projects, progressively evolving from a Senior Developer role towards technical analysis, solution design and architecture responsibilities.

Took sole responsibility for the maintenance and functional evolution of Zaragoza City Council's personnel management application, combining hands-on development with direct responsibility for the solution.

Later worked as a Technical Analyst on an environmental quality and waste management platform for the Government of Aragon, contributing to the definition and implementation of new modules and to the evolution of the solution architecture across frontend and backend components.

Technologies: Angular, Java, Spring Boot, JPA, Oracle, SQL, Docker, PrimeFaces, JSPX.

DEVELOPER – DxD Applications & IT Solutions

Started my professional career as a software developer, participating in international projects across the energy, consulting, automotive, and non-profit sectors.

During this period, I worked on Salesforce development and administration, full-stack applications using Java and Node.js, REST integrations, ETL processes, bulk data processing, and cloud deployments. My responsibilities ranged from application maintenance and development of new features to the independent design and implementation of integration services and backend solutions.

I also gained experience integrating platforms such as Heroku, Marketing Cloud, Eloqua, and SMS services, and contributed to internal technical training initiatives in Java and Salesforce.

Technologies: Salesforce, Apex, Visualforce, Java, Spring MVC, Hibernate, Node.js, Angular, PostgreSQL, Talend, REST, Heroku, Marketing Cloud.

ENGINEERING CONTRIBUTIONS

Design and evolution of reusable project foundations across different technologies, accelerating the start of new developments and promoting consistent technical standards across teams.

Creation of technical documentation, video tutorials, and training materials to facilitate technology adoption and knowledge sharing while reducing the learning curve.

Delivery of internal Java and Salesforce training for developers.

Promotion of engineering practices and standards such as code reviews, CI/CD, containerisation, testing, and component reuse, improving consistency and quality across projects.

CERTIFICATIONS

Java Standard Edition 6 Programmer Certified Professional (Score: 93%)

AZ-204 Exam: Developing Solutions for Microsoft Azure
